Back-end Software Developer | Java, Spring Boot, Kotlin, SQL and AWS

PROFESSIONAL SUMMARY

Back-end Software Developer with professional experience in **Java**, **Spring Boot**, **Kotlin**, **SQL** and **AWS**, working on the development and maintenance of **ERP** and **legacy systems** in a corporate production environment. Designed and implemented the full back-end of an app published on the Apple App Store, with distributed architecture, **Clean Architecture**, **REST APIs** documented with **Swagger/OpenAPI**, **microservices** with asynchronous messaging (**SQS/SNS**), observability with application logs and metrics in **CloudWatch** and infrastructure as code with **Terraform**, achieving ~5% conversion and ~44% active user retention. Complementary experience in **Node.js** and **NestJS**, in relational databases (**PostgreSQL**, **MySQL**) and **NoSQL** modeling, plus mobile (**Flutter**, **Swift**, **Java**, **Kotlin**) and web (**React**, **Angular**). Strong command of **Docker**, **CI/CD** pipelines and automated testing (**JUnit**, **MockK**, **TDD**). Currently completing a degree in Systems Analysis and Development with an AWS certification in progress. Advanced English (C1).

PROFESSIONAL EXPERIENCE

Software Developer (Back-end and Mobile) (Contractor)

RP System · 07/2021 - Present · Remote

- Development and maintenance of a corporate **ERP** system in **Java** with **Spring Boot** and **SQL**, working on the evolution of **legacy systems**, defect fixing, refactoring of critical modules and support of a live production environment.
- Design, writing and optimization of **SQL queries** on a relational database for ERP routines, reports and integrations, ensuring data integrity and operational performance.
- Development and maintenance of **REST APIs** in **Java/Spring Boot** for integration between the ERP and the mobile applications of the ecosystem, with authentication, input validation and error handling.
- Gathering of **BI dashboard** improvements with the business areas (logistics and inventory, sales attribution per salesperson, ABC analysis, returns and overdue-payment analysis) and translation into technical requirements for the back-end.
- Maintenance of a **Java mobile app** that generates **delivery routes and packing lists** for ERP product deliveries, including defect fixing and feature evolution.
- Contributing to the development of a new **Flutter (Dart)** app, turning the ERP BI dashboard into a mobile application, and maintenance of a **native iOS app in Swift**.
- Team collaboration with **Git**, collaborative versioning, **code review** and agile methodologies.

Mobile Software Developer (Contractor)

Grupo Fazolli · 07/2026 - 08/2026 · Fixed-term contract · Remote

- Built the **RealLead** app from scratch for iOS and Android in **Flutter/Dart** as the **sole developer**: 7 modules, 22k lines of code and published on the App Store in 5 weeks.
- Structured in **Clean Architecture** (data/domain/presentation) with **GetX** for state and dependency injection, **Supabase** for authentication and the **PostgreSQL** database, and **Dio** for REST API consumption.
- Implemented **full authentication**: email/password, **Google OAuth** and native Sign in with Apple (SHA-256 nonce), with in-app account deletion as required by the App Store.
- Integrated **third-party APIs** for real-time metrics dashboards, including **Meta Ads** (reported vs. actual CPL comparison), campaigns and affiliate commissions.
- **107 automated tests** (flutter_test + mocktail) and a **CI** pipeline on **GitHub Actions**, plus the full release process: build signing, App Store Connect and Google Play Console.
- Maintained the **RealLead** website in **React/TypeScript**, with a **Node.js** back-end and third-party integrations in **NestJS**.

Full Stack Software Developer

Freelance · 01/2025 - Present · Remote

- Design and implementation of a back-end in **Kotlin/Spring Boot** with **Clean Architecture**, **REST APIs** documented with **Swagger/OpenAPI**, **microservices** with asynchronous messaging (**SQS/SNS**) and AWS services (**S3**, **API Gateway**, **Lambda**), containerization with **Docker** and unit and integration test coverage with **JUnit** and **MockK**.
- Development of **RESTful APIs** following best practices: authentication, authorization, input validation, error handling and proper status codes, applying **dependency injection**, **Repository Pattern** and use-case-oriented architecture.
- Infrastructure as code with **Terraform** for provisioning AWS resources (S3, SQS, SNS, API Gateway, Lambda, ECS), **CloudWatch** for logs and metrics, and containerization with **Docker** and **Docker Compose**.
- Development and publication of an app on the Apple App Store with **Flutter (Dart)**, applying Clean Architecture and BLoC/Provider, plus 2 games, 4 responsive websites and 1 mobile app for clients and portfolio.

FEATURED PROJECT

Bible Game App - Bible Quiz published on the Apple App Store

Personal Project · 03/2025 - Present · Distributed back-end on AWS

- **What it is**: mobile quiz app with distributed architecture, developed end-to-end (from conception to App Store publication) with product metrics monitoring.

- **Back-end and architecture:** **Kotlin/Spring Boot** with **Clean Architecture** and layer separation (Adapters, Ports, Application, Domain), **REST API** documented with **Swagger/OpenAPI** and independent **microservices** communicating via REST and asynchronous messaging (**SQS/SNS**) for event-driven processing.
- **Infrastructure and cloud:** back-end containerized with **Docker**, deployed on **AWS** with infrastructure provisioned via **Terraform**, storage on S3, asynchronous processing with SQS, notifications via SNS, routing with API Gateway, serverless functions with Lambda and observability with application logs and metrics in **CloudWatch**.
- **Quality and testing:** unit and integration tests with **JUnit** and **MockK**, with authentication, authorization, input validation and error handling implemented in the API.
- **Result:** app published on the App Store with ~5% conversion rate (impression to download) and ~44% active user retention.

OTHER PROJECTS

User and Profile Management System

Personal Project · 03/2026 · Java + Angular + PostgreSQL

- Fullstack application with a **Java 24 / Spring Boot 3.4** back-end structured in **Clean Architecture** (domain, application, infrastructure) with isolated use cases and ports and adapters, a **REST API** with CRUD for users and profiles (ManyToMany) and persistence in **PostgreSQL** via Spring Data JPA. **Angular 16** front-end, containerized with **Docker Compose** and Nginx.
- **207 automated tests:** 111 on the back-end (JUnit 5, Mockito, coverage with JaCoCo) and 96 on the front-end (Karma/Jasmine), with 100% coverage.

Management System for a Psychology Clinic

Freelance (real client) · 2025 · Node.js + React

- Back-end API with **Node.js/Express** for a clinic web system, with **REST** endpoints for scheduling, automatic client notification and persistence in a relational database (SQLite). Integration with a **React** front-end.

Academic and Study Projects

University and personal · 2025 - 2026

- Modeling and persistence in **NoSQL databases** and APIs in **NestJS**, in university projects.
- **Batch** processing of **JSONL** files into CSV in streaming (constant memory, O(N)), with Clean Architecture and business rules isolated in the domain. Plus 2 games and 3 responsive websites, available on GitHub.

TECHNICAL SKILLS

Back-end: Java, Kotlin, Spring Boot, REST APIs, Swagger/OpenAPI, Microservices, Asynchronous messaging, ERP, Legacy Systems, Node.js, NestJS

Databases: SQL, PostgreSQL, MySQL, SQLite, NoSQL databases, Data modeling, Query optimization

Cloud and Infrastructure: AWS (S3, SQS, SNS, API Gateway, Lambda, ECS, CloudWatch), Terraform, Docker, Docker Compose, Supabase, CI/CD, GitHub Actions

Patterns and Architecture: OOP, Clean Architecture, SOLID, Repository Pattern, Dependency Injection, Ports and Adapters, MVC, MVVM, Layered architecture

Testing: JUnit, MockK, Mockito, TDD, Unit testing, Integration testing, Flutter widget/unit tests

Mobile: Flutter (Dart), Dart, Android, iOS, GetX, BLoC/Provider, Dio, Swift, SwiftUI, App Store Connect, Google Play Console

Front-end: React, Angular, TypeScript, JavaScript, HTML, CSS

Tools: Git, GitHub, GitHub Actions, Xcode, App Store Connect, Google Play, Transporter, Figma, Trello, Miro

Methodologies: Scrum, Kanban, Code Review, Collaborative versioning, Continuous integration and delivery (CI/CD)

EDUCATION

Systems Analysis and Development

Centro Universitário Integrado de Campo Mourão · Completion: June 2027

CERTIFICATIONS AND LANGUAGES

Certifications: AWS Certified Solutions Architect - Associate (SAA-C03) in progress; AWS Certified Cloud Practitioner (CLF-C02) - studies completed

Languages: English: Advanced (C1) · Portuguese: Native · Spanish: Basic
